Best Hit Agent Aggregator description.

Best Hit AgentAggregator explanation.

General

A peptideidentification is a match if at least 2 Agents return +1 upon inspection of the best peptidehit or +1 to a single Agent inspection with veto rights.

Aggregation

The inspection is performed only on the most confident peptidehit are summed.

If a sum is greater then or equal to 2 , only then the peptideidentification will be matched.

Plus, if the best peptidehit receives +1 upon inspection from an Agent with veto set to true, the peptideidentification is matched as well.

Score property

Define the number of Agents that must result in a positive inspection.

OK
